Members Vs Casuals

- 1 [Business Objective](#)
- 2 [Analysis Approach](#)
- 3 [Key Findings](#)
- 4 [Recommendations](#)
- 5 [Conclusion](#)

Business Objective

Understand how annual **members** and **casual** riders use **Cyclistic** bikes differently to support membership conversion strategies.

Why? To support strategies that convert casual riders into annual members, who are more profitable.

Analysis Approach

Data source: Cyclistic trip-data (Dec 31, 2024 – Dec 31, 2025)

Rider Types: Casual and Member

Key Metrics: Number of rides, Ride duration, Day of week usage, Station usage

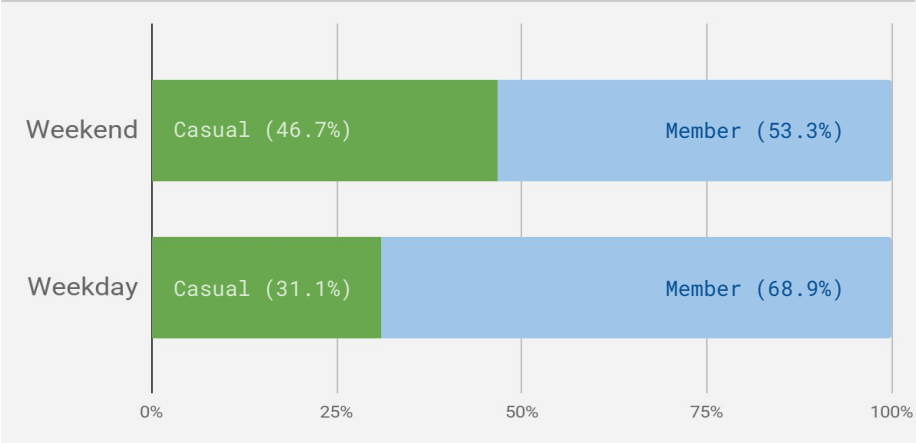

Tools Used: R, Google Sheets, Google Slides

Key Findings

Casual riders show stronger weekend preference than annual members

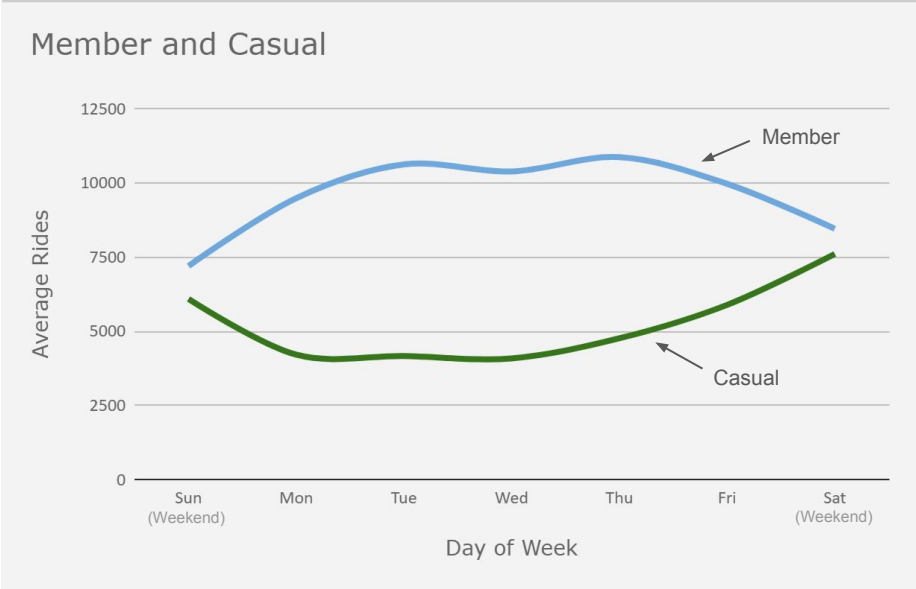

Weekend Vs Weekday

Weekdays: Mon Tue Wed Thu Fri

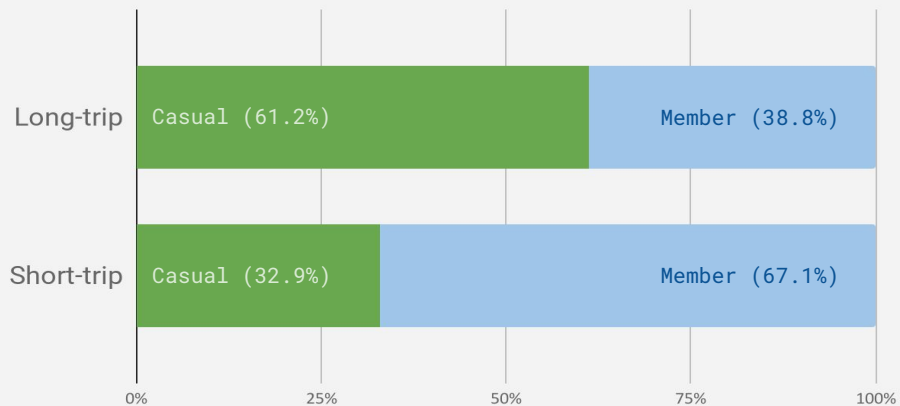

Weekends: Sat Sun

Average Rides Per Day of Week

Casual riders are more likely to take long-duration trips (>30 min)

Short-trip Vs Long-trip

Casual Vs Member

Average ride length

Member

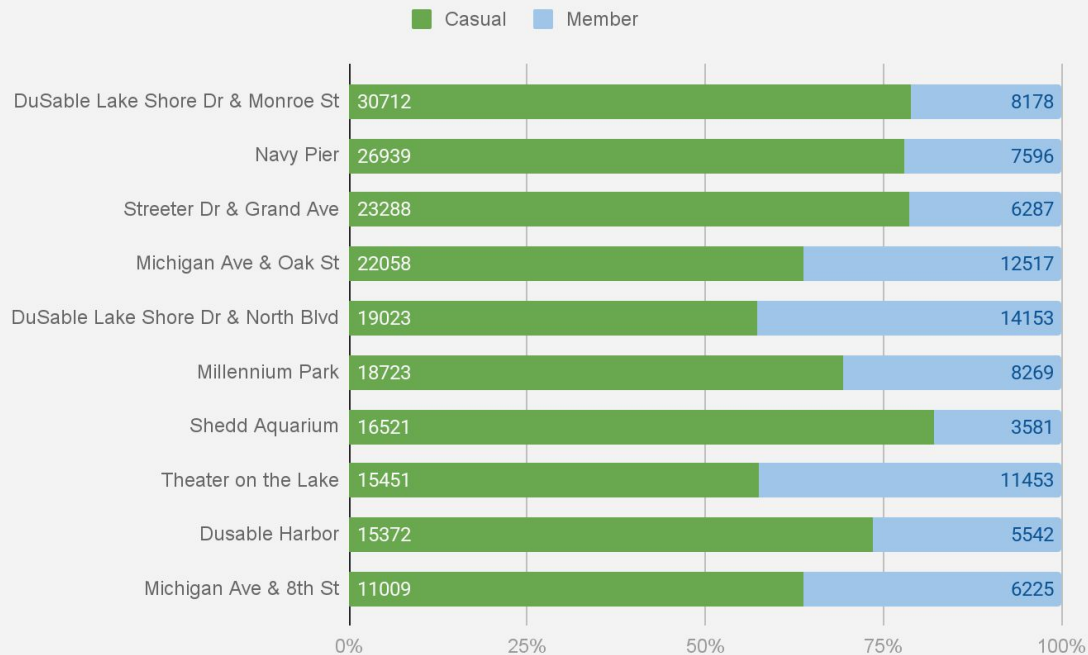

12 minutes

Casual

20 minutes

Top 10 Stations with higher Casual Riders

Start station and Member/Casual

These stations are ideal locations for in-app ads, signage, and membership prompts.

High casual concentration suggests leisure/tourist-heavy zones.

Top 3 Recommendations

Target weekend riders

Promote weekend-based membership offers for casual riders.

Convert long-trip users

Market memberships as cost-effective for longer rides.

Station-specific campaigns

Deploy membership ads at stations with high casual traffic.

Conclusion

Casual riders differ from members mainly in **timing (weekends)**, **trip duration**, and **station usage**.

These differences create clear opportunities for targeted membership conversion strategies.

Future analysis could include seasonal trends or commute-time behavior.
